

## Analog Pressure Indicator

## Model GT409

### UNIVERSAL PRESSURE INDICATOR

The Gentran model GT409 analog indicator/power supply is designed for use with any four leg, 350 ohm Wheatstone bridge pressure transducer. Zero and span can be easily adjusted without removing the module. Shunt calibration is a standard feature.

### EASY TO READ METER

The large 240 degree arc international scale makes the analog meter easy to read. Custom face plates, which have specific engineering units or other markings, can be easily added.

### DUAL ALARM SETPOINTS

Two alarms can be selected for above or below setpoint control. Relays provide N.O. (normally open) and N.C. (normally closed) contacts for maximum flexibility. Adjustments are made through pots on the faceplate.

### VERSATILE

The GT409 provides a choice of recorder outputs, damping constant, transducer sensitivities, input power, shunt-resistor calibrations, peak-hold, and reset options.

### EASY INSTALLATION

The easy-to-mount aluminum housing fits a 1/4 DIN cutout. Slide-type metal brackets hold the case firmly in place and can be installed quickly. The electronic module can be easily removed for option selection or service.

## THE GT409: ANALOG PRESSURE INDICATOR

The Gentran model GT409 analog pressure indicator is a combination transducer power supply, indicator, and signal conditioner. It is housed in a 1/4 DIN standard-size case of extruded aluminum, which protects against EMI and RFI noise, heat dispersion, and physical damage. The large 6 inch, 240 degree analog meter is styled for ease of reading and incorporates the new international face.

The GT409 is designed for use with a Gentran pressure transducer or any 4 leg, 350 ohm Wheatstone bridge strain-gage transducer. A calibration pushbutton allows for a quick span check and adjustment when you adjust zero at zero pressure. The complete electronic assembly can be removed and/or replaced from the front without disturbing the wiring in back. Various options are furnished as standard, dip-switch selectable. These options include various recorder outputs, transducer input sensitivity, power supply (120 or 240 VAC), dual setpoints, various calibration resistor values, whether reset on alarms is manual or automatic, and overall response time.

The dual setpoint option can be used to give a preliminary warning before an actual shutdown sequence is initiated. You can program HI/HI, LO/LO, LO/HI, and HI/LO. The relays are isolated during a setpoint change or calibration check to prevent accidental emergency shutdown.
